

# Magnets attract

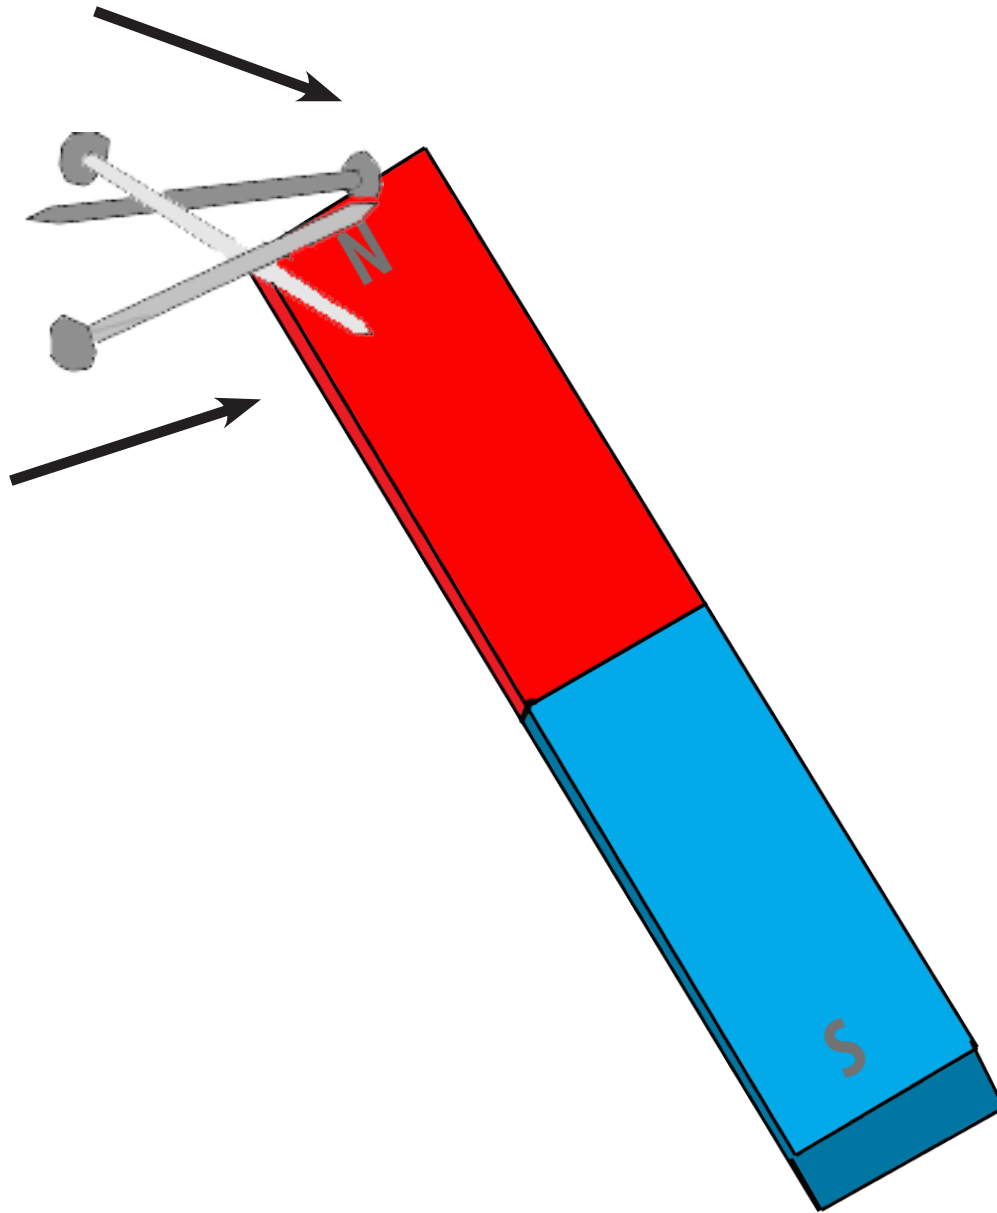

Do magnets attract all metals?

# magnet

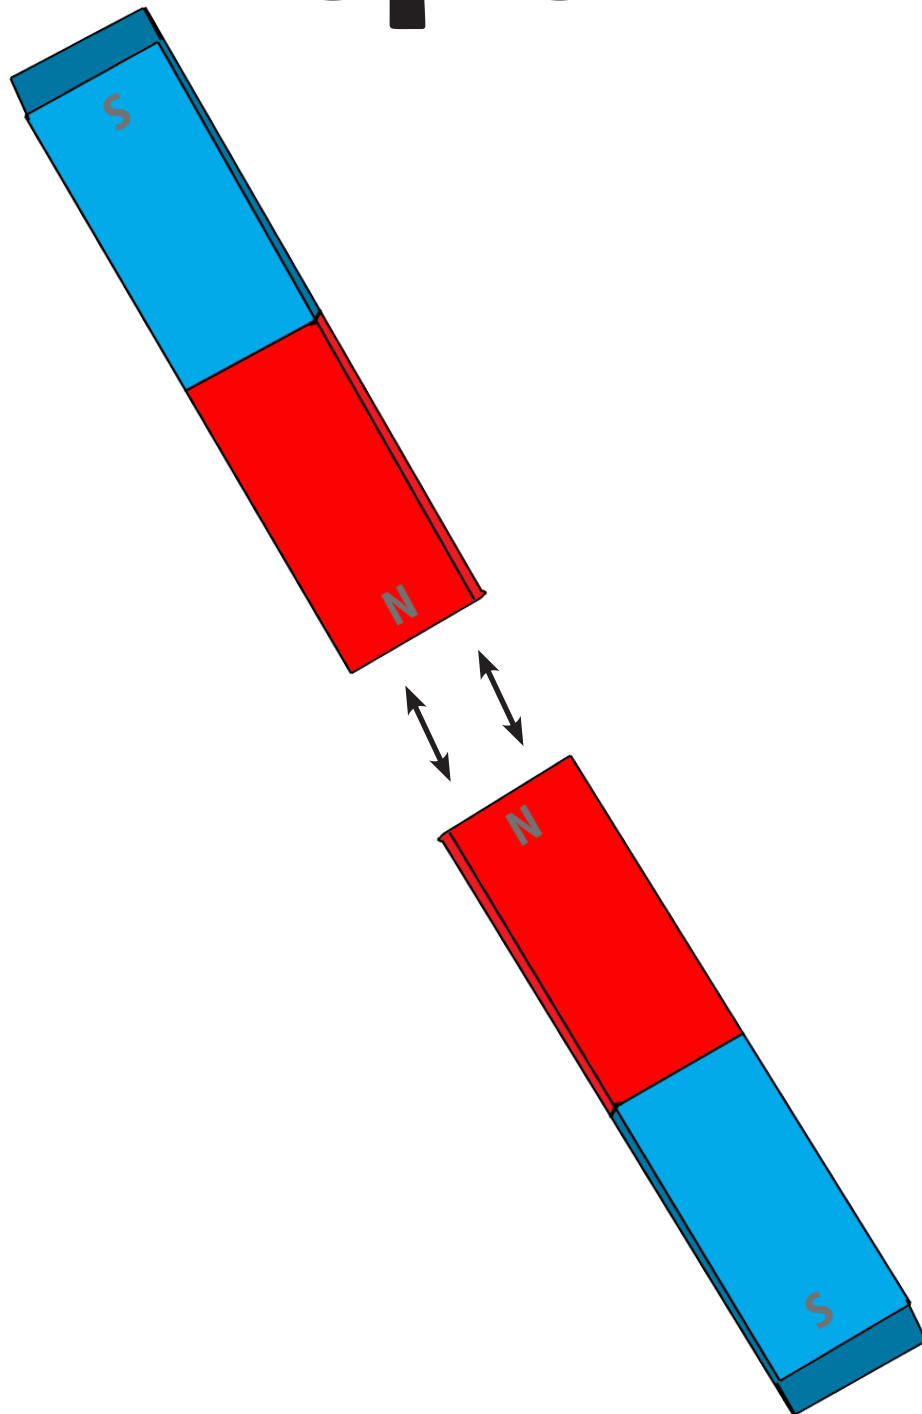

- An object that attracts iron, steel or nickel .
- Its ends are called north and south poles.

# attract

- A force that pulls an iron object towards a magnet.

# repel

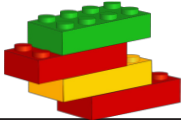

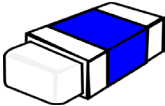

- A force that pushes back.
- Like charges repel.

## What are attracted to magnets?

Take your magnet around and see if you can find these things.

Test them with your magnet.

Are they all attracted? Complete the table by ticking the correct column.

Object	Attracted	Not Attracted
Paper clip 		
Lego 		
Scissors 		
Pencil 		
Coin 		
Bulldog clip 		
Eraser 		
Zip 		
Chair
